## Use Case Diagram

## Use Case Tables

### Use Case 01:

Field	Details
<b>Designation</b>	UC-01
<b>Name</b>	User Registration/Login
<b>Authors</b>	Nimra Tariq
<b>Priority</b>	High
<b>Criticality</b>	Critical (Core functionality)
<b>Responsible</b>	Backend Team
<b>Description</b>	Allows users to register a new account or log in to an existing account to access the system's features.
<b>Trigger Events</b>	User opens the app/website and attempts to access features requiring authentication.
<b>Actors</b>	User
<b>Pre-Conditions</b>	User has internet access and a device to access the application/website. For registration, they have valid personal details or a social media account.
<b>Post-Conditions</b>	User is successfully authenticated and logged into their account.
<b>Result</b>	User gains access to personalized features and can interact with the system.
<b>Main Scenario</b>	<ol style="list-style-type: none"><li>1. User selects the "Register" or "Login" option.</li><li>2. User enters registration details (email, password, etc.), login credentials, or chooses a social login option.</li><li>3. The system validates the provided information.</li><li>4. Upon successful validation, the user is logged in.</li></ol>
<b>Alternative Scenario</b>	<ol style="list-style-type: none"><li>A1. User enters invalid registration details → Error prompt.</li><li>A2. User enters incorrect login credentials → Error prompt.</li><li>A3. Social login fails → Redirect to manual entry.</li></ol>

## **Use Case 02:**

<b>Field</b>	<b>Details</b>
<b>Designation</b>	UC-02
<b>Name</b>	Browse Menu
<b>Authors</b>	Nimra Tariq
<b>Priority</b>	High
<b>Criticality</b>	Moderate
<b>Responsible</b>	Frontend Team
<b>Description</b>	Allows users to view the available food items, categories, descriptions, and prices.
<b>Trigger Events</b>	User navigates to the menu section of the application/website.
<b>Actors</b>	User
<b>Pre-Conditions</b>	User is logged in and has internet access.
<b>Post-Conditions</b>	The menu items and details are displayed to the user.
<b>Result</b>	User can view the available food options and make selections for ordering.
<b>Main Scenario</b>	<ol style="list-style-type: none"><li>1. User navigates to the "Menu" section.</li><li>2. The system retrieves and displays the current menu items, organized by categories.</li><li>3. User can scroll through the menu, view item names, descriptions, and prices.</li></ol>
<b>Alternative Scenario</b>	A1. No internet connection → Error prompt. A2. Menu data retrieval fails → Error prompt. A3. User applies filters (e.g., dietary needs) → System updates the displayed menu accordingly.

### **Use Case 03:**

<b>Field</b>	<b>Details</b>
<b>Designation</b>	UC-03
<b>Name</b>	Place Order
<b>Authors</b>	Nimra Tariq
<b>Priority</b>	High
<b>Criticality</b>	Critical
<b>Responsible</b>	Backend Team, Payment Gateway Integration Team
<b>Description</b>	Allows users to select items from the menu, customize them, and submit an order for delivery or pickup.
<b>Trigger Events</b>	User initiates the checkout process after adding items to their cart.
<b>Actors</b>	User
<b>Pre-Conditions</b>	User is logged in, has added items to their cart, and has a valid delivery address or has selected pickup.
<b>Post-Conditions</b>	Order is successfully placed and submitted to the system. Payment is processed. Order confirmation is displayed to the user.
<b>Result</b>	The restaurant receives the order for fulfillment. The user receives confirmation of their order.
<b>Main Scenario</b>	<ol style="list-style-type: none"> <li>1. User reviews items in their cart.</li> <li>2. User provides delivery details or confirms pickup.</li> <li>3. User proceeds to payment.</li> <li>4. User enters payment information and confirms payment.</li> <li>5. System processes the order and payment.</li> <li>6. Order confirmation is displayed to the user.</li> </ol>
<b>Alternative Scenario</b>	<p>A1. Invalid address → Prompt for valid entry.</p> <p>A2. Payment failure → Display error, request alternative.</p> <p>A3. Items unavailable → Inform user, offer partial order.</p> <p>A4. Apply promotion → Invoke "Apply Festive Promotion."</p> <p>A5. Request support → Invoke "Request Support."</p> <p>A6. Provide feedback → Invoke "Provide Feedback."</p> <p>A7. Partial completion → Invoke "Partial Order Completion."</p>

## **Use Case 04:**

<b>Field</b>	<b>Details</b>
<b>Designation</b>	UC-04
<b>Name</b>	Track Order
<b>Authors</b>	Simaab Malik
<b>Priority</b>	Medium
<b>Criticality</b>	Moderate
<b>Responsible</b>	Backend Team
<b>Description</b>	Allows users to view the current status and location (if applicable) of their placed order.
<b>Trigger Events</b>	User navigates to the "Track Order" section or clicks on a tracking link in their order confirmation.
<b>Actors</b>	User
<b>Pre-Conditions</b>	User has placed an order and has the order ID or is logged in to view their order history.
<b>Post-Conditions</b>	The current status and estimated delivery time/location of the order are displayed to the user.
<b>Result</b>	User can monitor the progress of their order.
<b>Main Scenario</b>	<ol style="list-style-type: none"> <li>1. User navigates to the "Track Order" section and enters their order ID or views their order history.</li> <li>2. The system retrieves the latest status and tracking information for the specified order.</li> <li>3. The status (e.g., "Preparing," "Out for Delivery," "Delivered") and potentially the real-time location is displayed to the user.</li> </ol>
<b>Alternative Scenario</b>	<p>A1. Invalid order ID entered → System displays an error message.</p> <p>A2. No tracking information available → System displays a message indicating that tracking is not yet available.</p> <p>A3. System fails to retrieve tracking info → System displays a temporary error message.</p>

## **Use Case 05:**

<b>Field</b>	<b>Details</b>
<b>Designation</b>	UC-05
<b>Name</b>	Redeem Loyalty Points
<b>Authors</b>	Simaab Malik
<b>Priority</b>	Medium
<b>Criticality</b>	Moderate
<b>Responsible</b>	Backend Team, Marketing Team
<b>Description</b>	Allows users to use their accumulated loyalty points to get discounts on their orders.
<b>Trigger Events</b>	User initiates the checkout process or navigates to a loyalty points redemption section.
<b>Actors</b>	User
<b>Pre-Conditions</b>	User is logged in and has accumulated loyalty points in their account.
<b>Post-Conditions</b>	The specified number of loyalty points is deducted from the user's balance, and the corresponding discount is applied to their order.
<b>Result</b>	User gets a reduced price on their order by using their loyalty points.
<b>Main Scenario</b>	<ol style="list-style-type: none"> <li>1. User proceeds to checkout.</li> <li>2. System displays the user's available loyalty points and an option to redeem them.</li> <li>3. User enters the number of points they wish to redeem.</li> <li>4. System validates the points and applies the discount to the order total.</li> <li>5. User completes the order with the discounted price.</li> </ol>
<b>Alternative Scenario</b>	<p>A1. User enters more points than available → System displays an error message indicating insufficient points.</p> <p>A2. Loyalty program rules prevent redemption on certain items or promotions → System informs the user.</p> <p>A3. System fails to apply the discount → System displays a temporary error message.</p> <p>A4. User attempts to partially redeem points during the order process → The "Partial Redemption" include use case is invoked within the "Place Order" use case.</p>

## **Use Case 06:**

<b>Field</b>	<b>Details</b>
<b>Designation</b>	UC-06
<b>Name</b>	Manage Menu
<b>Authors</b>	Simaab Malik
<b>Priority</b>	High
<b>Criticality</b>	Critical
<b>Responsible</b>	Backend Team, Content Management Team
<b>Description</b>	Allows the manager to add, modify, and remove food items from the restaurant's menu, including details like name, description, price, and category.
<b>Trigger Events</b>	Manager logs into the admin panel and navigates to the menu management section.
<b>Actors</b>	Manager
<b>Pre-Conditions</b>	Manager has valid login credentials and access to the admin panel.
<b>Post-Conditions</b>	The restaurant's menu is updated with the changes made by the manager.
<b>Result</b>	The updated menu is reflected in the user-facing application/website.
<b>Main Scenario</b>	<ol style="list-style-type: none"> <li>1. Manager navigates to the menu management section.</li> <li>2. Manager selects an option to add a new item, edit an existing item, or remove an item.</li> <li>3. Manager enters or modifies the item details (name, description, price, category, etc.).</li> <li>4. Manager saves the changes.</li> <li>5. The system updates the menu database.</li> </ol>
<b>Alternative Scenario</b>	<p>A1. Manager enters invalid data (e.g., non-numeric price) → System displays an error message.</p> <p>A2. System fails to save the changes to the database → System displays an error message.</p> <p>A3. Manager attempts to update recipe content for a menu item → The "Update Recipe Content" include use case is invoked.</p>

## **Use Case 07:**

<b>Field</b>	<b>Details</b>
<b>Designation</b>	UC-07
<b>Name</b>	Manage Promotions
<b>Authors</b>	Areeza Afzadi
<b>Priority</b>	Medium
<b>Criticality</b>	Moderate
<b>Responsible</b>	Marketing Team, Backend Team
<b>Description</b>	Allows the manager to create, edit, and deactivate promotional offers, including discounts, special deals, and festive promotions.
<b>Trigger Events</b>	Manager logs into the admin panel and navigates to the promotions management section.
<b>Actors</b>	Manager
<b>Pre-Conditions</b>	Manager has valid login credentials and access to the admin panel.
<b>Post-Conditions</b>	Promotional offers are created, updated, or deactivated in the system.
<b>Result</b>	The created/updated promotions can be applied by users during order placement.
<b>Main Scenario</b>	<ol style="list-style-type: none"> <li>1. Manager navigates to the promotions management section.</li> <li>2. Manager selects an option to create a new promotion, edit an existing one, or deactivate a promotion.</li> <li>3. Manager enters the promotion details (name, description, discount percentage/amount, validity period, applicable items, etc.).</li> <li>4. Manager saves the changes.</li> <li>5. The system updates the promotions database.</li> </ol>
<b>Alternative Scenario</b>	<p>A1. Manager enters invalid promotion details (e.g., illogical discount rules) → Error prompt.</p> <p>A2. System fails to save the changes to the database → Error prompt.</p> <p>A3. Manager needs to update recipe content related to a promoted item → The "Update Recipe Content" use case is invoked.</p>

## **Use Case 08:**

<b>Field</b>	<b>Details</b>
<b>Designation</b>	UC-08
<b>Name</b>	Sync Real-time Tracking
<b>Authors</b>	Areeza Afzidi
<b>Priority</b>	High
<b>Criticality</b>	Moderate
<b>Responsible</b>	Backend Team
<b>Description</b>	Allows the delivery personnel's current location to be continuously updated and made available to the system and potentially the customer.
<b>Trigger Events</b>	Delivery personnel starts their shift or begins the delivery of an order via their mobile application. Location services are active on their device.
<b>Actors</b>	Delivery Personnel
<b>Pre-Conditions</b>	Delivery personnel is logged into their delivery application, has an active internet connection, and has granted location access to the application.
<b>Post-Conditions</b>	The delivery personnel's real-time location data is transmitted to the central system.
<b>Result</b>	The system can track the delivery progress and provide updates to the customer.
<b>Main Scenario</b>	<ol style="list-style-type: none"> <li>1. Delivery personnel starts their delivery task on their app.</li> <li>2. The app periodically captures the device's GPS coordinates.</li> <li>3. The location data is transmitted to the central server.</li> <li>4. The server updates the delivery personnel's current location in the tracking system.</li> </ol>
<b>Alternative Scenario</b>	<p>A1. No internet connection → Location data cannot be transmitted.</p> <p>A2. GPS signal is weak or unavailable → Location accuracy is reduced or no data is available.</p> <p>A3. Delivery personnel disable location services → No location updates are sent.</p>

## **Use Case 09:**

Field	Details
<b>Designation</b>	UC-09
<b>Name</b>	Process Payment
<b>Authors</b>	Bisma Ramzan
<b>Priority</b>	High
<b>Criticality</b>	Critical
<b>Responsible</b>	Payment Gateway Provider, Backend Team
<b>Description</b>	Handles the transaction of funds from the user to the restaurant after the payment details have been validated.
<b>Trigger Events</b>	The system receives a confirmation that the payment details are valid.
<b>Actors</b>	Payment Gateway
<b>Pre-Conditions</b>	User has initiated the payment process and provided their payment details.
<b>Post-Conditions</b>	The payment is either successfully processed or declined.
<b>Result</b>	The restaurant receives payment for the order, and the user's payment account is charged (or the transaction fails).
<b>Main Scenario</b>	<ol style="list-style-type: none"> <li>1. The system sends the validated payment details and transaction amount to the payment gateway.</li> <li>2. The payment gateway processes the transaction.</li> <li>3. The payment gateway returns a success or failure response to the system.</li> <li>4. The system updates the order status and informs the user about the payment outcome.</li> </ol>
<b>Alternative Scenario</b>	<p>A1. Insufficient funds on the user's account → Payment gateway returns a decline message.</p> <p>A2. Technical error at the payment gateway → Payment gateway returns a transaction failure message.</p> <p>A3. Payment is flagged as potentially fraudulent → Payment gateway may hold or decline the transaction.</p>

## **Use Case 10:**

<b>Field</b>	<b>Details</b>
<b>Designation</b>	UC-10
<b>Name</b>	Process Voice Commands
<b>Authors</b>	Bisma Ramzan
<b>Priority</b>	Medium
<b>Criticality</b>	Moderate
<b>Responsible</b>	AI Development Team
<b>Description</b>	Interprets and executes the commands spoken by the user through the voice interface. This includes understanding the intent and triggering the appropriate actions within the system.
<b>Trigger Events</b>	User initiates voice interaction and speaks a command.
<b>Actors</b>	SpiceBot
<b>Pre-Conditions</b>	The voice recognition system is active and has transcribed the user's speech. The user may or may not be validated (the diagram shows "Validate Customer Identification" as included).
<b>Post-Conditions</b>	The system attempts to fulfill the user's request based on the interpreted command.
<b>Result</b>	The requested action is performed (e.g., browsing the menu, placing an order), or the user receives feedback if the command could not be understood or executed.
<b>Main Scenario</b>	<ol style="list-style-type: none"> <li>1. User speaks a command.</li> <li>2. The system transcribes the voice input.</li> <li>3. SpiceBot analyzes the transcribed text to understand the user's intent.</li> <li>4. SpiceBot triggers the corresponding use case (e.g., "Browse Menu," "Place Order").</li> </ol>
<b>Alternative Scenario</b>	<p>A1. Voice input is not recognized or understood → SpiceBot prompts the user to repeat or rephrase.</p> <p>A2. The requested action cannot be performed due to system limitations or errors → SpiceBot informs the user.</p> <p>A3. The process requires customer identification → The "Validate Customer Identification" include use case is invoked.</p> <p>A4. The command involves waking up a vehicle component → The "Vehicle Wake Command" include use case is invoked.</p>
